VAPOR PRESSURE OF MIXTURES OF VINYLIDENE
CHLORIDE AND VINYL CHLORIDE. [1961] 4p. 1 ref.
Order from OTS or SLA \$1.10 61-20160

Trans. of Zhurnal Prikladnoi Khimii (USSR) 1946,
v. 19, p. 30-34.

DESCRIPTORS: *Vinyl chlorides, Chlorides, Mix-
tures, Vapor pressure, Measurement.

Vapor pressures of vinyl chloride at from 20 to 60°C.
and of vinylidene chloride within 20 and 90°C were
determined and satisfactory agreement was established
of the data for vinyl chloride with those reported in the
literature. Vapor pressures of three mixtures of vinyl
chloride with vinylidene chloride were determined
within the temperature interval of 20 to 80°C and it was
found that the vapor pressure of these mixtures can be
calculated with sufficient approximation on the basis of
the law of Raoult. (Author)

THE MECHANISM OF THE THERMIC DECOMPOSITION OF AMMONIA SALTPETER, II. [1960] 16p. (2 figs. omitted) 16 refs.

Order from LC or SLA mi\$2. 40, ph\$3. 30 61-10569

Trans. of *Zhurnal Prikladnoy Khimii (USSR) 1960, v. 33 [no. 5] p. 1052-1059.

The proposed mechanism consists of three steps: (1) the hydrolysis of saltpeter; (2) the thermic decomposition of nitric acid formed as the result of hydrolysis; and (3) interaction of nitrogen dioxide with ammonia which are formed as the result of steps 1 and 2. The reaction of step 3 has a radical character.

The proposed mechanism gives the possibility to substantiate: autocatalysis in the initial step of decomposition and its change to the monomolecular decomposition of saltpeter, the possibility of spontaneous decomposition of saltpeter by its production, and the change of qualitative and quantitative composition of (Chemistry--Physical, 12 May 61) (over)
